## In the Claims:

Claim 1 (Original). A method for the preparation of an aqueous suspension of carbon nanotubes, comprising adding to an aqueous medium, prior to the addition of carbon nanotubes or thereafter, a water-soluble polymeric material selected from polysaccharides and polypeptides, thereby to separate the nanotubes into dispersed, essentially single tubes.

Claim 2 (Canceled).

Claim 3 (Original). A method for the preparation of dry non-tangled carbon nanotubes comprising: i) the preparation of an aqueous suspension of carbon nanotubes according to claim 1; and ii) the removal of water from said suspension.

Claim 4 (Original). A method of claim 3, wherein the removal of water comprises evaporation, lyophilization, or filtration.

Claim 5 (Original). A method according to claim 1, wherein the concentration of dry, polymer-coated, carbon nanotubes in the suspension is up to 65% by weight.

Claim 6 (Original). A method according to claim 1, wherein the mass ratio of polymer to carbon nanotubes ranges from 0.05 to 20.

Claim 7 (Original). A method according to claim 1, wherein the polymer is selected from gum arabic, carrageenan, pectin, polygalacturonic acid, alginic acid, chitosan, combinations thereof and derivatives thereof.

Claim 8 (Original). A method according to claim 7, wherein the polymer is gum arabic.

Claim 9 (Original). A stable suspension of carbon nanotubes, prepared according to claim 1.

Claim 10 (Original). A powder of carbon nanotubes, comprising a polymer in admixture

therewith.

Claim 11 (Original). The powder of claim 10, wherein the polymer is adsorbed on the

nanotubes.

Claim 12 (Currently Amended). Use of the carbon nanotubes of claim 9 for creating a

required conductive pattern, comprising: i) providing a solid support, and ii) depositing said

carbon nanotubes onto a said solid support in a the required conductive pattern.

Claim 13 (Currently Amended). Use of the carbon nanotubes of claim 9 as a template for

the growth of crystals of silica, or a hybrid material of silica with carbon nanotubes, comprising:

i) providing a silica containing material, and ii) contacting said material with said carbon

<u>nanotubes</u>.

Claim 14 (Currently Amended). Use of the carbon nanotubes of claim 9 as a reinforcing

agent for polymeric matrices, comprising: i) providing a silica containing material, and ii)

contacting said material with said carbon nanotubes.

Claim 15 (Original). Use of the carbon nanotubes according to claim 14, wherein the

polymeric matrix is elastomer.

Claim 16 (Currently Amended). Use of the carbon nanotubes of claim 9 as an electric

conductive connector between two electronic devices, comprising: i) providing two electronic

devices, and ii) depositing said carbon nanotubes between said device to create a continuous

pattern.

Claim 17 (Original). Use according to claim 16, wherein at least one of the devices is a

nanoelectronic device.

Claim 18 (Currently Amended). Use of the carbon nanotubes of claim 9 in a technique

that comprises the formation of a thin layer on a surface, comprising: i) providing a solid surface,

Page 3 of 10

Appl. No. 10/667,204 Amendment Dated November 7, 2006 Reply to Office Action of August 7, 2006

and ii) depositing said carbon nanotubes onto said surface in a pattern enabling at least a partial cover of said surface by a layer of said nanotubes.

Claim 19 (Original). Use according to claim 18, wherein the technique is printing.

Claim 20 (Original). Use according to claim 18, wherein the technique is coating.
